

MAXVIEW

Need a little help choosing the perfect **Roof Mount System** for you?

The ultimate automatic
satellite systems wherever
your adventure takes you!

Why Maxview?

Mobile Satellite Technology Made In Britain

Maxview have been manufacturing for over 55 years with one aim to make receiving TV as simple as it can be.

The best way to get great TV reception whether you tour in the UK or abroad is to use a satellite system. Our strength is not only the design and quality of products, but also the extensive range we manufacture to ensure we have a solution to suit YOUR requirements and vehicle.

Using this guide to help you identify YOUR requirements, will allow the perfect system for YOU!

Whichever option you choose, you will receive free lifetime software updates, a 3 year guarantee and full customer care throughout the life cycle of your product.

The ultimate Satellite System wherever your adventures takes you!

Step 1. Choose your System

SEEKER
WIRELESS

The Seeker Wireless is a fully automatic roof mounted satellite system designed to receive satellite TV and radio with the convenience of a wireless control panel.

Model Code: **MXL003**

CONNECT

The Connect brings smart technology to your satellite system, offering the ultimate convenience.

The free Connect app offers full control of your system, with the additional benefit of automatic software updates ensuring uninterrupted viewing and a greater range of satellites.

Model Code: **MXL028**

TARGET

The Target is a fully automatic roof mounted satellite system designed to receive satellite TV and radio using a wired control box.

Model Code: **MXL017**

For full product details visit our website www.maxview.co.uk, or speak to your dealer.

Step 2. Select a Dish Size

All our roof mounted systems are available in 65cm and 85cm dish sizes. The dish size determines the geographic area from which you can receive your desired satellite, this area is known as the satellites 'footprint'. For UK channels, we require the Astra 2 satellite.

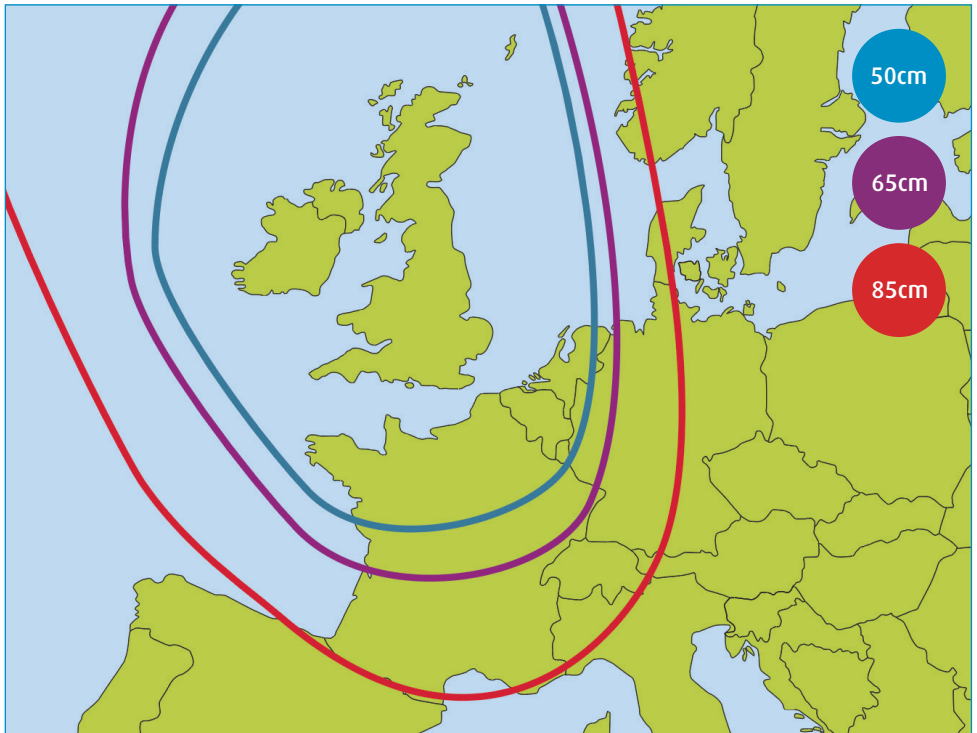

Generally, the larger the dish, the greater the geographic area or 'footprint' from which you should receive satellite TV. Typically, to receive Astra 2 a 65cm dish offers coverage into the middle of France, whilst an 85cm dish will offer coverage approaching the Spanish border or further with automatic skew, see step 3. Once you are out of this footprint you will still be able to lock onto Astra 2 but receive a more basic range of channels.

*Note: If you have roof space limitations, we are also able to offer a 50cm Dish (available on Target and Connect models only). Please ensure you have checked and are happy with the footprint coverage.

50cm 65cm 85cm

*For full system sizes and specifications please visit our website or see our leisure products catalogue.

Astra 2 Footprint Map - For UK TV

Note: There is a range of additional satellites to choose from, offering European TV and some UK channels, including Astra 1, Hotbird amongst others. See our website for more details.

Step 3. Do I add Automatic Skew?

All our systems in this guide have a Automatic Skew option.

We recommend Automatic Skew for those who plan to travel across Southern Europe to places such as the South of France where the satellite footprint fringe is reached.

It is necessary to rotate the LNB to compensate the polarisation deviation or skew angle caused by the curvature of the earth.

Our Automatics Skew systems use GPS to calculate the optimum skew angle for your given location whilst a motor within the LNB enclosure adjusts the LNB accordingly.

If you only travel within the UK Automatic Skew is not necessary.

Yes

No

View our Automatic Skew video for more details.

Step 4. Receiver Compatibility

Before you decide LNB options (Step 5) you will need to determine your satellite receiver type. This in turn will dictate the type of LNB you will need.

We know that some of our customers choose to take their satellite receiver away with them on their adventures.

Any of these are compatible with our systems (example pictures only, models may vary).

Free to Air (FTA)

FreeSat

TV with Free to Air (FTA)

Sky Q™

Sky HD™/Sky+™

Sky Q™

The release of Sky Q™ back in 2016 has been causing our customers viewing issues as a result of the compatibility of the Sky Q™ receiver and the Satellite System. Sky Q™ is different from any previous editions of SKY TV™ (Sky +, Sky HD etc.) in the way the system receives the TV signal. Sky Q™ requires unique parts for connection from the cable to satellite dish.

You will need a Sky Q™ Satellite System along with your Sky Q™ receiver if you want Sky Q™ TV*.

*Sky Q™ Satellite System variants can only be used in conjunction with Sky Q™ receivers.

Wanting to use Sky Q™ and another type of receiver (E.g Free To Air)?

If you wish to use any combination of a Sky Q™ receiver or FTA receiver you will require a Connect or Target System fitted with the Sky Q™ and Free To Air LNB**.

**Please note: Sky Q™ and FTA options are not available on Seeker models or Auto Skew variants.

Terms & Conditions. It is the responsibility of the end user to understand the contractual agreement between themselves and Sky™ & any limitations of equipment this may have. In no event shall Maxview be liable for any indirect, incidental, or consequential damages pertaining to this document.

Step 5. Select LNB Option

LNB options depend on the amount of TV's you would like to view and the type of satellite receiver you will be using.

Single

Single LNB options are for use with a single input satellite TV/receiver.

Single

Twin*

Twin LNB options provide 2 connections for the operation of a second TV/receiver or receiver with hard drive recording function.

Twin

Quad

Quad LNB's will provide 4 connections for up to 4 TV's.

Quad

Sky Q™ and Free To Air

For Sky Q™ and Free To Air. Please refer to your receiver's compatibility. Reference opposite page for details.

Sky Q™ and FTA LNB

Sky Q™

For Sky Q™ only. Please refer to your receiver's compatibility. Reference opposite page for details.
