<p>A Remove the old appliance by taking out the fixing screws in the front and sides of the installation. The screws will be located on the front of the appliance going into the batons indicated and along the side of the appliance near the pressing into the worktop.</p> <p>Then remove the batons as indicated to ensure the cabinet aperture is 502-504mm wide, from the front to the back and top to bottom of the cabinet.</p>	
<p>B Fold the supplied installation gauge (as indicated) and mark the trim positions, using the front edge of the worktop as reference on both sides of the cabinet.</p>

<p>C Fit horizontal trims along each side of the worktop using screws in the 3 dimpled holes near the notches at the bottom.</p> <p>N.B. The dimples should face outward from the appliance, so the trim stands off the cabinet. The direction notches should be at the bottom of the trim.</p>	
<p>D Fit vertical trims with 3 screws using the clearance holes, select holes relevant to the cabinet installation.</p> <p>N.B. It is recommended to use at least one hole from the top group and at least one hole from the bottom group.</p>

<p>E Fit the bottom trim (view shown inside cabinet), using 3 screws fitted from inside the cabinet.</p>	
<p>F Fold back the top tab on right vertical trim, pliers may be required.</p> <p>N.B. THIS IS ESSENTIAL FOR ENSURING ADEQUATE VENTILATION TO THE APPLIANCE.</p>

<p>J Use the screws supplied to fix the appliance to the vertical trims at the fixing positions as indicated.</p> <p>Then check that the right-hand vents are clear and free from obstructions.</p> <p>N.B. THIS IS ESSENTIAL FOR ENSURING ADEQUATE VENTILATION TO THE APPLIANCE.</p>	
<p>K Lift the appliance lid and use screws appropriate for the installation (12mm+ long screws) to fix the appliance horizontally into the worktop plates.</p>
